PROFESSIONAL SUMMARY

Meticulous and driven BI / Business Analyst and AI Systems Developer with 15+ years of cross-domain experience spanning finance, fintech, e-commerce, logistics, automotive, manufacturing, and retail. Proven expertise in business and quantitative analysis, BI reporting, data pipeline design, and stakeholder management. Recently expanded into AI agent development — designing, developing, and deploying multi-agent LLM systems on Hugging Face Spaces, with a focus on RAG pipelines, multi-agent orchestration, and persistent conversational AI architectures. Adept at bridging technical depth with business insight, managing multi-functional teams, and driving measurable outcomes.

Core Competencies: Business Requirements Analysis • BI Reporting & Visualization • Quantitative & Technical Analysis • Multi-Agent AI Development • RAG Pipeline Design • Stakeholder Engagement • UAT Testing • Functional Specifications • Data Engineering • Process Improvement

PROFESSIONAL DEVELOPMENT

Shadow Mastery Coach — in liaison with Jungian Archetypal Psychology <i>The Shadow Mastery School (IPHM Accredited)</i>	Apr 2025 – Sep 2025
Certified Graduate – Contemporary Analytical Psychology & Neo-Jungian Studies <i>Pacifica Graduate Institute, USA</i>	Sep 2023 – Jul 2024
Diploma – Dark Psychology (Minors: Emotional Intelligence; Organizational Psychology) <i>Emo Matrix Emotion and Behavior Science Co., India</i>	Jul 2023 – Sep 2023

TECHNICAL SKILLS

Programming Languages	Python, VBA, HTML
AI / LLM Technologies	Hugging Face Hub, Hugging Face Inference API, Hugging Face Spaces, Transformers, FAISS, Sentence-Transformers, RAG (Retrieval-Augmented Generation), Multi-Agent Orchestration, LLM Integration (Llama 3, Groq, Ollama), FastAPI, Docker, Gradio, Tavily API, LangChain
Scripting	Windows PowerShell
Databases	SQL Server, Oracle 11g, PostgreSQL, MySQL, Google BigQuery
Database Tools	DbVisualizer, pgAdmin III, SQL Server Management Studio, SQL Developer, MySQL Workbench
Business Intelligence Tools	Microsoft Power BI, Tableau, SAP Business Objects, Prophix, PowerPivot, MDX, OLAP, QlikView
Marketing Intelligence Tools	Google Analytics, Google AdSense, Google AdExchange, DoubleClick, Google BigQuery

Testing Tools	HP Application LifeCycle and Management
Job Scheduling Tools	Jenkins, Autosys
Operating Systems	Windows, Unix
IDEs & Build Tools	PyCharm, Visual Studio, Visual Studio Code, Cursor, NetBeans, WordPress
Ticketing Tools	BMC Remedy, JIRA
Other Tools	Salesforce, ExactTarget, Citrix, Confluence, Oracle NetSuite

AI DEVELOPMENT PROJECTS

CGJI01 — Cognitive-Generative Jungian Intelligence System

2025– Present

Personal Project | Deployed on Hugging Face Spaces (Free-Tier CPU, Docker SDK)

- Designed, developed, and deployed CGJI01 — an experimental multi-agent AI platform for Jungian psychological analysis — on Hugging Face Spaces using Docker SDK on free-tier CPU infrastructure
- Architected a parallel multi-agent orchestration pipeline comprising 9 specialized agents: Jung, Dream, Shadow, Myth, Epistemic, Buddhist Psychology (BPsy), JRed, Synthesis, and Facilitator — each contributing a distinct analytical lens to user material
- Implemented a Retrieval-Augmented Generation (RAG) pipeline using FAISS vector indexing and Sentence-Transformers (all-MiniLM-L6-v2) for grounded local Jungian knowledge retrieval, building and maintaining the FAISS index from a custom corpus
- Developed a FastAPI-based backend with RESTful endpoints (/chat, /analyze), stateful session management, and JSON-based persistent conversation memory across sessions
- Integrated Hugging Face InferenceClient with meta-llama/Llama-3.1-8B-Instruct as the primary LLM backend; earlier iterations built on Ollama and Groq
- Built a dual-mode user interface: a browser-based web app (with speech recognition, session restoration, and a multi-panel agent output board) and a terminal CLI for analysis flows
- Incorporated Tavily API for optional real-time web search augmentation to supplement local retrieval on open-domain queries
- Implemented a longitudinal epistemic profiling layer to track cross-session thematic depth, reasoning patterns, and user behavioral tendencies — functioning as an evolving user memory model

Chunker

2026– Present

Personal Project | Deployed on Hugging Face Spaces (Free-Tier CPU, Docker SDK)

- Chunker, a supposed substitute for RAG, is a low-level "browse a file and extract" tool of knowledge extraction via Progressive Disclosure from a large and loaded source such as a book (articles, papers work too) - taking a cue from Sergii Makarevych's work, in turn derived from Andrej Karpathy's [LLM Wiki](#), described in the former's LinkedIn article, <https://www.linkedin.com/pulse/new-way-encode-documents-ai-agents-navigable-trees-sergii-makarevych-a6cof/> - at <https://huggingface.co/spaces/prashantmatlani/chunker>
- Chunker fulfills the base requirement of getting something along the lines of chunks and summaries as elaborated paragraphs from knowledge-source such as books. - though scaled up a little to include expanded Summary at Level 3 - worth hundreds of pages; called, although, "Jungian Chunker" it's usable for any pdf (though yet to be checked the max number of pages it can cover upto, but it probably runs into a few hundreds, and on the downside, its time-consuming)
- The combined script - with two Phases, I (Extract and rewrite chunks - The "Leaves") and II (Incremental Aggregation into Summaries - The "Branches"), fired sequentially - aligns with:
 - a/ the "Dense Theory" of knowledge extraction, and
 - b/ with Makarevych's "Incremental Aggregation" logic of the availability of a set of chunks triggering the system to generate a summary. The "Dense Theory" of knowledge extraction is the idea that the LLM should not only extract chunks but also immediately synthesize them into higher-level summaries, creating a "Knowledge Tree" with multiple levels of abstraction.
- The temp_group: Acts as a "waiting room." Once it hits 5 chunks, it empties itself into the Phase II Aggregator.

- Memory Continuity: When the summary_node is created, it's saved to context_buffer["latest_summary"]. This means chunk #6 will actually "know" the summary of chunks #1–5, helping it stay consistent with the themes already established
- The "Children" Key: In the final JSON, each summary block now lists which leaf chunks belong to it; making it a Navigable Tree

EMPLOYMENT EXPERIENCE

Equinox Capital, India

June 2023 – Present

Analyst

Technical & Quantitative Analysis — Equities and Derivatives

- Technical and quantitative analysis of equities and derivatives on NSE (National Stock Exchange, India)
- Volatility-driven price projections via various models — ARCH, EGARCH, etc. — and simulations
- Developed in-house tools, dashboards, and analytical reports for trading insight and decision support
- Designed and built a ground-up equity trading model/architecture inclusive of a full data pipeline from NSE to localhost — covering market analysis through to live trading execution
- Maintained end-to-end documentation including a fully interactive digital library serving as a guide to market nuances

Freelance — Teaching (Canada / India)

Jan 2019 – Apr 2023

- Taught STEM, Social Studies, and English for Grades 7 through 12
- Served as Communication Access Aid and English Language Instructor for Professionals, Adults, and Seniors
- IELTS training and Communication Skills Development coaching
- Taught Computers, Tech, Digital Skills, and Digital Literacy for Grades 4 through 9

Robert Half Management Resources, Canada

Mar 2018 – Oct 2018

Business Analyst

Pricing Analyst — Metrie

- Assessed data and pricing across multiple revenue streams to support strategic business decisions
- Collaborated closely with Sales and FP&A teams to explore business development and growth strategies
- Delivered insights on profitability performance across customers, products, and transactions
- Key contributor in providing recommendations to drive firm-level performance for senior leadership
- Partnered with stakeholders on forecasting accuracy and maintaining data integrity
- Liaised with various support teams for cross-functional coordination

Reporting Analyst — Pinnacle Renewable Energy

- Administered integration of Prophix and Netsuite systems
- Co-ordinated with developers on rebuilding and modernizing BI systems
- Designed and developed BI reports — including IFRS, Logistics, Plant Operations, Sales, and External Reports
- Designed HTML-based templates for invoicing and logistics in Netsuite
- Developed performance reports and MS Access-based front-end applications

Altran, France

Jun 2017 – Dec 2017

Consultant

Pricing Analyst — Nissan Automotive Europe

- Collaborated with external agencies to formulate and implement pricing algorithms
- Consolidated market research and defined price strategies for Nissan Europe
- Automated daily operational tasks and developed performance reports
- Tracked bugs and managed enhancements in the internal BI tool
- Liaised with developers and operational teams; administered UAT and system patch rollouts across environments

Alphabet Fleet Management (BMW Group), France

Nov 2016 – Jun 2017

Application Analyst — BI Analyst

- Built BI reports in SAP Business Objects; liaised with SAP support teams for bug reporting and universe object requests
- Planned and executed bimonthly iterations via Scrum methodology; tracked progress using JIRA
- Collected business requirements from Finance, Marketing, Commercial, and Operations teams; authored functional specifications for new reports
- Advised teams on process improvements, guidelines, and best practices
- Tested reports in DEV environments during system upgrades and patch rollouts
- Worked with technical and functional teams across Europe on cross-regional tasks

Africa Internet Group (Rocket Internet), France

Apr 2015 – Nov 2016

Head of Business Intelligence — Classifieds

- Defined, implemented, and delivered on the BI roadmap for Classifieds across 30+ entities in 20+ countries
- Analyzed business figures and advised management on strategic insights
- Standardized, automated, and further developed existing KPI reports across the organization
- Worked with the Classifieds tech team on new BI feature development and enhancements
- Provided data warehouse enhancement specifications to technical developers
- Prepared shareholder reports and dashboards; managed BI job monitoring and performance reporting

Automation & BI Analyst — Central Commercial Team

- Automated daily/weekly/monthly performance reports for Fashion and GM (General Merchandising) Planners
- Prepared web-based tools for the Jumia Seller Center community
- Scheduled and encoded automatically triggered emails via ExactTarget
- Collected requirements from Heads/Category Managers; collaborated with BI team on new report development
- Actively involved in data migration from legacy DWH to newer systems
- Prepared automated Excel and QlikView-based dashboards for performance analysis
- Generated ad hoc performance reports from OLAP Cubes
- Led implementation of the Order Management System in the Paris Warehouse
- Developed long-term structuring tools for logistics operations

Intern — Logistics Business Developer & BI Analyst

- Collaborated with the Head of Logistics to improve and maintain the Paris warehouse logistics system shipping to African ventures
- Played a key role in minimizing time-to-market from Paris to Africa
- Actively involved in developing a global purchase order creation tool and harmonizing import processes across all ventures
- Generated sales and inventory analysis reports; automated monthly bulk reports
- Improved the Business Intelligence platform and existing operational models

Newedge Group [Société Générale Corporate & Investment Banking], France

Nov 2013 – May 2014

Intern — Analyst, Risk Systems

Application Development — Operational Risk Department & Level 2 Support

- Developed internal tools for the company's Risk Assessment & Mapping process
- Built various Excel-based macros for reporting and process automation
- Tested newly developed systems/reports in liaison with the DEV team; obtained appropriate sign-offs
- Analyzed and reported on operational errors and incidents to management and shareholders
- Performed parameterization and functional analysis of new requirements; authored specifications and user documentation

Larsen & Toubro Infotech Ltd., India

Nov 2010 – Sep 2012

Systems Engineer — Application Support Analyst for CitiBank

- Provided application support and monitoring for CitiBank production systems
- Built BI reports in SAP Business Objects

- Monitored and executed Autosys jobs and data feeds; performed bulk database updates
- Performed month-end financial processing and bi-monthly snapshots of critical financial data
- Managed escalations; liaised with DEV, DBA, and support teams; handled testing, documentation, and sign-offs

E4E Business Solutions India Pvt. Ltd., India

Sep 2009 – Nov 2010

Engineer — Global IT Infrastructure Support for Nomura Services India Pvt. Ltd.

- Level 2 support for Networks, Remote Access, Servers, Messaging, Desktops, RSA SecurIDs, and User Accounts
- Actively participated in migration projects and BCP activities
- Managed access and identity levels; deployed packages on EMS and SMS build machines

Sitel India Pvt. Ltd., India

Jul 2008 – Sep 2009

Customer Services Professional — Technical Support Representative

- Served as Technical Support Representative for dial-up, broadband, and satellite-based internet services of Earthlink across USA

TECHNICAL CERTIFICATIONS

- Genesys Cloud CX Certified Professional
- ITIL V3 Foundation

EDUCATION

2012 – 2015

Institut Supérieur d'Électronique de Paris, France

Diplôme d'Ingénieur | French Engineering Masters

Information Technology — System Integration & Project Management

2005 – 2009

Watumull Institute of Electronics Engineering & Computer Technology (University of Mumbai), India

Bachelor of Engineering

Electronics & Telecommunications

2002 – 2005

Institute of Technology, Ulhasnagar, India

Diploma

Electronics & Telecommunications

2002

S.P.P. New Era High School, Ulhasnagar, India

SSC
